CASE STORY

**MAREL**

Marel relies on synchronous drum motors from NGI

”The oil-free synchronous drum motors from NGI are among the coolest and most powerful currently available on the market. Hygienic design is extremely important to us. These drum motors are powerful, have low-self-heating, and are dry and robust.

In addition, they reduce the individual components of a machine which makes construction easier. Also, the service from NGI is indeed outstanding and right on the mark.”

or at least that’s the opinion of Andri Sveinsson, Project Manager for Innovation at Marel

# Comparison

A few of the advantages by using our synchronous drum motors are higher food safety, increased efficiency and lower energy consumption
